

md2pdf

Convert Markdown files to PDF with GitHub-style rendering. No external binaries required.

Features

- GitHub-style typography and colors (fully self-contained — no internet required at render time)
- Syntax-highlighted fenced code blocks via [Pygments](#)
- Tables, blockquotes, footnotes, task lists, admonitions
- Interactive file selector when no arguments are given
- A4 page size with sensible print margins

Requirements

- Python 3.10+
- [markdown](#) — Markdown parser
- [weasyprint](#) — HTML/CSS → PDF renderer
- [pygments](#) — syntax highlighting

Setup

```
python3 -m venv .venv
source .venv/bin/activate      # Windows: .venv\Scripts\activate
pip install -r requirements.txt
```

Usage

Interactive mode (no arguments)

```
python md2pdf.py           # scans the script's own directory
python md2pdf.py -d ~/docs # scans a specific directory
python md2pdf.py --dir /some/path # same, long form
```

Scans the target directory for `.md` files and presents a numbered menu:

```
Markdown files found:
  1. CHANGELOG.md
  2. CONTRIBUTING.md
  3. README.md

Select files to convert.
Examples: 1 | 1,3,5 | 2-4 | 1,3-5,7 | all

Your selection: 1,3
```

Direct mode

```
python md2pdf.py README.md           # single file
python md2pdf.py doc1.md doc2.md     # multiple files
python md2pdf.py *.md                # glob
```

Each `.md` file produces a `.pdf` in the same directory:

```
README.md → README.pdf
doc1.md   → doc1.pdf
```

Supported Markdown syntax

Feature	Syntax
Headings	<code># H1</code> through <code>##### H6</code>
Bold / italic	<code>**bold**</code> , <code>_italic_</code>
Strikethrough	<code>~~text~~</code>
Inline code	<code>`code`</code>
Fenced code block	<code>```python ... ```</code>
Table	<code>\ col \ col \ </code>
Blockquote	<code>> text</code>
Task list	<code>- [x] done / - [] todo</code>
Footnote	<code>text[^1] ... [^1]: note</code>
Table of contents	<code>[TOC]</code>
Admonition	<code>!!! note "Title"</code>

Project structure

```
md2pdf/
├─ md2pdf.py      # main script
├─ requirements.txt # pinned dependencies
└─ README.md
```
